System Usability Scale

Scale: 1 = strongly disagree, 5 = strongly agree

#	Statement	Rating
1	I think that I would like to use this chatbot frequently.	3
2	I found interacting with the chatbot unnecessarily complex.	1
3	I thought the chatbot was easy to use.	5
4	I think that I would need support to be able to use this chatbot.	3
5	I found the various functions in this chatbot were well integrated.	4
6	I thought there was too much inconsistency in this chatbot.	2
7	I imagine that most people would learn to use this chatbot quickly.	4
8	I found the chatbot cumbersome to use.	3
9	I felt confident using the chatbot.	4
10	I needed to learn a lot of things before I could get going with this chatbot.	2
11	I would imagine that most people would learn to use this chatbot very quickly.	4

Personality of the chatbot

Focused · Minimalist · Calm · Professional · Quiet

How it felt to interact with the chatbot

Patient (waiting for the model) · In control · Private · Reassured (knowing it was offline) · Slightly impatient on long inputs

Additional comments and feedback

The GUI itself is genuinely easy to use — there are only three controls a first-time user really needs (paste text, pick a word count, click Summarise), and the streaming output gives clear feedback that something is happening. The colour palette is consistent and the status bar showing “Ollama · phi3:mini · Local · Offline” helps reassure the user about what is going on behind the scenes.

The main usability weakness is response time. On a CPU-only laptop, a 75-word summary takes around 56–58 seconds, which is long enough that the user starts to wonder whether the app has frozen, even with streaming output. A visible token counter or a progress estimate would help. The lack of a Stop button is the second clear issue — once Summarise is clicked, the only way out is to wait or kill the app.
